S. N. & S. Co's. TENDER GREEN PEAS

(10 pounds to 100 feet of drill—80 to 100 pounds to the acre.)

Peas are quite hardy and for early crop sow as soon as the ground can be worked. Then sow in succession every two weeks until the first of August. They require moderately rich soil but not too rich. Plant the dwarf varieties in rows 12 to 18 inches apart, and the tall varieties 3 feet apart. The tall varieties should be staked. By using various types and making several sowings of each, good Peas can be had for a long season. For late sowing, use Early Dwarf Varieties.

Do you know how to avoid the usual disappointment of a poor Pea crop after mid-July. It is easy to get a big crop of juicy Peas even up to late August. Instead of planting at two- or three-week intervals get Long-Lasting Pea Garden and plant all at the same time in early Spring. This will allow a good root system to develop before hot weather comes. The varieties will bear in the order shown to late August.

The young leaves are so tender they require only a few minutes to cook; stems may be cooked like asparagus, their flavor is suggestive of Artichokes. Sow Tampala when the ground is warm, it has an unusually long period of usefulness in the Summer garden.

"Nodampoff" SPHAGNUM MOSS IS THE SENSATION OF THE HORTICULTURAL WORLD

This sure, successful method of germinating and growing seeds, bulbs and house plants, has been used for many years by professional growers only. Now it is available for home gardeners. This product is fool-proof. Any person who follows simple directions can now produce high yields of flowers, vegetable and bulbs in ordinary pots and pans.

This versatile product works like magic, without constant care, and without the use of chemical protectants to safeguard seeds and seedlings from diseases. It will germinate seeds faster and safer than any other medium.

Milled Sphagnum Moss is highly recommended by the U. S. Department of Agriculture, as well as thousands of growers and nurserymen, as the finest germinating and growing medium.

No need to sterilize Sphagnum to kill damping off fungi (that's what causes your baby plants to get limber necks and die by the hundreds). Treated "Nodampoff" Sphagnum is sure poison for damping off. No need for daily watering; soak the moss and forget it for a few days. Handy to sow. Drop seeds on top of moss, that's all. Better root systems on your plants with "Nodampoff" treated Sphagnum Moss and the roots come out whole, not broken off.

"Nodampoff" Sphagnum Moss is used to germinate and grow thousands of varieties of seeds and plants, including these:

Petunias, Azaleas, Delphiniums, Snapdragons, Marigolds, Zinnias, Pansies, Cabbages, Peppers, Tomatoes, Conifers and other annuals, perennials too numerous to mention.

This product is also successfully used to root cuttings of Ivy, Begonias, Geraniums, Gloxinia, African Violets and many others. Also use mixed with soil to correct alkali conditions.
